DETAILED ACTION

Election/Restrictions

1. Applicant's election of Species I claims 1-7 in the reply filed on 2/23/07 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).
2. Claims 8 is withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected Species II, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 2/23/07.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Vardi (6,831,632).

Character recognition (note fig. 5, 542) module recognizing the character based on said handwriting data and said first information (note col. 9 lines 39-42 and col. 10 lines 66-67);

A control module (note fig. 5, block 530) controlling said power management unit based on said second information (note col. 10 lines 42-52).

Regarding claim 7 Vardi discloses,

Power management unit manages power consumption of said information recognition device by changing an operating voltage of said information recognition device based on an instruction in accordance with said second information supplied from said control module (note col. 10 lines 48-52)
